Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Mol. Microbiol. 16, 813-815, 1995
A;Title: The 3'-terminal half of the btuB gene of Citrobacter freundii defines essential
A;Reference number: S77723
A;Status: not compared with conceptual translation
A;Molecule type: DNA
A;Residues: 1-377 <WAR>
A;Residues: 1-377 <WAR>
A;Genetics:
C;Genetics:
A;Genetics:
A;Genetics: membrane protein; vitamin B12 transport
C;Supperfamily: vitamin B12 receptor; tonB-dependent receptor amino-terminal homology; tc
C;Keywords: membrane protein; vitamin B12 transport
F;85-337/Domain: tonB-dependent receptor carboxyl-terminal homology <TNC>
3-oxoacyl-(acyl-carrier-protein) synthase III [imported] - Streptococcus pneumoniae (stq

Patent No. 6673904

GENERAL INFORMATION:

APPLICANT: Nishikawa, Mitsuo et al.

TITLE OF INVENTION: POLYPEPTIDES AND POLYNUCLEOTIDES

FILE REFERENCE: 32066/37483

CURRENT APPLICATION NUMBER: US/09/912,935

CURRENT PILLING DATE: 2001-07-24

PRIOR APPLICATION NUMBER: PCT/US00/35260

PRIOR FILING DATE: 2000-12-23

NUMBER OF SEQ ID NOS: 53

SOFTWARE: PATENTIN VERSION 3.0

SEQ ID NOS: 53

Sequence 35, Application US/09912935

Patent No. 6673904

GENERAL INFORMATION:
GENERAL INFORMATION:
TITLE OF INVENTION: POLYEBPTIDES AND POLYNUCLEOTIDES

TITLE OF INVENTION: POLYEBPTIDES AND POLYNUCLEOTIDES
FILE REPERENCE: 32066/37483

CURRENT FILIATION NUMBER: US/09/912,935

CURRENT FILIATION NUMBER: PCT/US00/35260

PRIOR APPLICATION NUMBER: PCT/US00/35260

PRIOR PILING DATE: 2000-12-23

NUMBER OF SEQ ID NOS: 53

SOFTWARE: Patentin version 3.0

SEQ ID NO 35

LENGTH: 425

GRNERAL INFORMATION:
APPLICANT: Nishikawa, Mitsuo et al.
TITLE OF INVENTION: METHODS AND MATERIALS RELATING TO STEM CELL GROWTH FACTOR-LIKE
TITLE OF INVENTION: POLYPEPTIDES AND POLYNUCLEOTIDES
FILE REPRESENCE: 3206/37483
CURRENT APPLICATION NUMBER: US/09/912,935
CURRENT FILING DATE: 2001-07-24
PRIOR APPLICATION UNBER: PCT/US00/35260
PRIOR FILING DATE: 2000-112-23
NUMBER OF SEQ ID NOS: 53
APPLICANT: Labat, Ivan
APPLICANT: Labat, Ivan
APPLICANT: Labat, Ivan
APPLICANT: Labat, Ivan
APPLICANT: Tang, Y. T.
APPLICANT: Tang, Y. T.
APPLICANT: Tang, Y. T.
APPLICANT: Chids, Cheng-Chi
APPLICANT: Childs, John
TITLE OF INVENTION: Methods and Materials Relating to No. 6667391el Stem Cell
TITLE OF INVENTION: Growth Factor-Like Polypeptides and Polynucleotides
TITLE OF INVENTION: Growth Factor-Like Polypeptides and Polynucleotides
TITLE OF INVENTION: Growth Factor-Like Polypeptides and Polynucleotides
TILE REFERENCE: 3026/37630A
CURRENT FILING DATE: 2001-01-16

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               셤
                                                                                                                                                                                                                                                                                                  Jail Descursor - sea squirt (Halocynthia roretzi)

N.Alternate names: entactin
C,Species: Halocynthia roretzi
C,Date: 30-Sep-1993 #sequence_revision 27-Feb-1997 #text_change 09-Jul-2004
C,Accession: 531213
R,Nakae, H.; Sugano, M.; Ishimori, Y.; Endo, T.; Obinata, T.
Bur. J. Blochem. 213. 11-19, 1993
A,Title: Ascidian entactin/nidogen. Implication of evolution by shuffling two kinds of A;Reference number: 531213; MUID:9328676; PMID:8477687
A,Accession: 831213
A,Molecule type: mRNA
A,Reference number: 531213; MUID:9328676; PMID:8477687

An isolated molecule comprising an antibody variable region which specifically binds to an extracellular domain of a tumor endothelial marker (TEM) protein, useful for inhibiting tumor growth.

Claim 1; Page 206-207; 331pp; English.

The invention relates to an isolated molecule comprising an antibody variable region which specifically binds to an extracellular domain of a tumour endothelial marker (TEM) protein selected from ABB90732, ABB90740, ABB90749, ABB907569. The antibodies which bind to TEM proteins have cytostatic, immunostimulant and antiangiogenic activity. They are useful for inhibiting tumour growth, neoangiogenesis in subjects bearing a vascularised tumour, polycystic kidney disease, diabetic

```
ö
retinopathy, rheumatoid arthritis and psoriasis. Human, mouse and rat TEM genes and the encoded proteins (ABL92075-ABL92141 and ABB90721-ABB90789) are disclosed, as are marker oligonucleotide sequences: tumour endothelial markers (TEM) ABL921996-ABL92041 and ABL92143-ABL92191; normal endothelial markers (NEM) ABL92042-ABL92074; and pan-endothelial markers
                                                                                                                                                                                                                                                                                                          TQLSQDLGGGTLAMDTLPDNRTRVVEDNHSYYVSRLYGPSEPHSRELWVDVAEANRSQVK 120

                                                                                                                                                                                                                                                                                                  The present invention relates to a novel method for the isolation of endothelial cells (ECs), and the identification of genes expressed in normal and tummour ECs. Tumour endothelial marker (TEM), normal endothelial marker (TEM), normal endothelial marker (TEM) genes are identified in human ECs. The human EC marker proteins and the polynucleotide sequences encoding them are useful for detecting, diagnosing or treating tumours as well as polycystic kidney disease, diabetic retinopathy, rheumatoid arthritis, and psoriasis. They are all useful for inhibiting neoangiogenesis or tumour angiogenesis, for inducting an immune response to tumour endothelial cells in a patient, for identifying candidate drugs for treating tumours. The present sequence represents a human TEM or NEM protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       IHTILSNITHRQASRVVLSFDPPFYGHPLRQITIATGGFIFMGDVIHRMLTATQYVAPLMA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                polypeptide with biological activity. The polymorleotides and polypeptides are useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders and other traits, to assess biodiversity, as nutritional sources or supplements. The polymucleotides may also be used as molecular weight markers, chromosome markers or map related gene positions, or as an antigen to raise anti-DNA antibodies or elloit immune response. The polypeptides are useful for raising antibodies, as markers for tissues in which the corresponding polypeptide is expressed, for re-engineering damaged or diseased tissues, for treating myeloid or lymphoid cell disorders, in bone cartilage, tendon, ligament and/or nerve tissue growth or respensation, in wound healing, in tissue repair and replacement, in healing of burns, incisions and ulcers, and in treating cancer. The present sequence represents the amino acid sequence of a novel human
                                                                                                                                                                                                                                                                                                                                                                                                                                                 New polynucleotides and secreted proteins, useful for treating myeloid or lymphoid cell disorders, in bone cartilage, tendon, ligament and nerve tissue growth or regeneration, in wound healing, and in tissue repair and

Predicting, diagnosing or prognosing malignant neoplasia by detecting at least two markers, where the markers are genes from one or more chromosomal regions altered in malignant neoplasia,.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This invention relates to a novel method for the prediction, diagnosis, or prognosis of malignant neoplasia by the detection of at least two markers. The invention may also be useful for the development of

cytostatic compounds through the regulation of the expression of a gene or activity of a protein associated with malignant neoplasia. The method is useful for prediction, diagnosis or prognosis of malignant neoplasia such as breast cancer, ovarian cancer, gastric cancer, colon cancer, oesophageal cancer, wesenchymal cancer, pladder cancer or non-small cell lung cancer. The polymucleotides and polypeptides defined in the specification, antisense polymucleotides targeting the polymucleotides and compounds identified by the screening methods are useful for preventing or treating malignant neoplasia. The disease treated is preferably breast cancer. The present sequence is that of a human malignant neoplasia. The disease di numan malignant neoplasia.
                                                                                                                                                                                                                                                                                                                                                                                                            9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         forensic; nutritional source; damaged tissue; diseased tissue; myeloid cell disorder; lymphoid cell disorder; myeloid cell disorder; bene cartilage tissue growth; tendon tissue growth; ligament tissue growth; nerve tissue growth; regeneration; wound healing tissue repair; tissue replacement; burn; incision; ulcer; cancer; human.

The invention relates to an isolated polynucleotide encoding a polypeptide with biological activity. The polynucleotides and polypeptides are useful in dagnostics, forenaics, gene mapping, identification of mutations responsible for genetic disorders and other traits, to assess biodiversity, as nutritional sources or supplements. The polynucleotides may also be used as molecular weight markers, chromosome markers or map related gene positions, or as an antigen to raise anti-DNA antibodies or elicit immune response. The polypeptides are useful for raising antibodies, as markers for tissues in which the corresponding polypeptide is expressed, for re-engineering damaged or diseased tissues, for treating mythoid or lymphoid cell disorders, in bone cartilage, tendon, ligament and/or nerve tissue growth or egeneration, in wound healing in tissue repair and replacement, in healing of burns, incisions and ulcers, and in treating cancer. The present sequence represents the amino acid sequence of a novel human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 267
